KOS203TC

> INTRODUCTION

The KOS203TC is a cost effective in head transmitter that accepts thermocouple temperature sensors and converts sensor output over a configured range to a standard industrial (4 to 20) mA transmission signal.

A simple push button operation allows the user to select TC type, burnout direction, select fixed ranges and trim the (4 and 20) mA points.

If required the desired range can be specified at the time of order, removing the need for user configuration. If the range is not specified, then the transmitter will be shipped with the default range of (0 to 1000) °C type K

> FEATURE HIGHLIGHTS

PUSH BUTTON CONFIGURATION

The KOS203TC can be ranged against a probe held at high and low range values or by using a thermocouple simulator representing the required temperature using a simple “teach” method. Burnout direction can also be set using the same push button.

A zero and span trim function is also incorporated into the KOS203TC to give maximum flexibility.

SENSOR BURN OUT DETECTION

If a sensor wire is broken or becomes disconnected the KOS203TC output will automatically go to its user defined level upscale or downscale and the LED illuminates.

STABILITY

The KOS203TC in head transmitter incorporates the latest digital technology to ensure accurate, low drift performance.
